

## ***Frequently Asked Questions:***

### ***What size dust collector is needed for our application?***

Everyone's application and need is different. There is NOT a one size fits all product. Contact one of our sales representatives for sizing the appropriate CFM and model needed. You can also fill out and send us our "Application Requirement Form" that can assist with any questions we may have.

### ***Do you service used dust collector equipment?***

Yes. We can provide maintenance or repair services at our Wisconsin facility. We can also rebuild or retrofit an outdated design.

### ***What does MERV or MERV Rating mean?***

MERV stands for Minimum Efficiency Reporting Value. This rating is to help you judge the effectiveness of a filter. MERV values range from 1 to 16. The higher the MERV value the more efficient the filter will be in capturing airborne particles. Our mobile dust collectors come standard with MERV 12 cartridges. We can also provide MERV 15 and MERV 16 products.

### ***Do you offer rental equipment?***

Yes. We have different sizes of equipment available for rent. Contact us for availability on our new and used inventory.

### ***Do you sell replacement parts?***

Yes. We stock new replacement parts for our production line of Dust-Pro and Flex-Vent models.

### ***Can you provide us with a demonstration of how the equipment operates?***

Yes. We could schedule a personal showing of the equipment at our Wisconsin facility. We are in the process of having informational videos available of the units in operation.
